

ABBYY® FlexiCapture 10

Enterprise Capture Platform

Capture Paper to Increase the Speed of your Business

Many enterprises still rely on paper for their business processes and often they require significant manual labour to manage and extract the data in these documents. To remain competitive businesses must find ways to reduce costs by streamlining resource-intensive labour and reassigning staff to higher-value tasks. With electronic processing enterprises can automate data entry and standardise the flow of paper, achieving significant cost reductions and increased productivity.

Wherever businesses deal with documents and whenever those documents drive transactions, organisations can benefit from process automation:

- **Maximised resource use:** increase efficiency by eliminating time-consuming and expensive manual error-prone processes such as document pre-sorting and manual keying for business-critical documents
- **Increased competitiveness:** increase responsiveness and speed-up reaction times to customer enquiries
- **High-quality data output:** the assurance of high quality data in the format you require means less time and resources spent validating work and better, more reliable data deposited into your back-end systems
- **Reduced operating costs:** for manual document handling, and cut hours for manual keying to extract business relevant data from documents

Automate Document-driven Business Processes

Although different industries often have distinct business processes and regulations, they all share the need to efficiently access data from paperwork. FlexiCapture allows enterprises to automate those processes in the following areas:

Forms processing: extract hand printed information and barcode data from surveys, application and order forms and classify multiple form types

Invoice processing: extract all data, including line items that also can stretch over multiple pages, from supplier invoices

Purchase order or claims processing: extract information from scanned or faxed orders and validate those against purchase databases

Digital mailrooms: classify and separate documents according to document type and content and route documents into backend workflows for further processing

All Industries.
All Documents.
All Data.

Many different industries benefit from the automatic separation, classification and extraction of information from various types of documents:

Healthcare – patient records, medical prescription forms

Accounting – invoices, purchase orders, payment slips

Human Resources – job applications, personnel forms, curriculums

Banking and Finance – deposit notes, credit application, contracts, mortgage documents, loan applications

Insurance – insurance claim and benefit forms, policy agreements

Transportation – shipping documents, receipt notifications, bills of lading

Education – voting ballots, student surveys, examinations

Government – tax forms, contracts, voting ballots

FlexiCapture 10: Enterprise Capture Platform

FlexiCapture Enterprise Capture Platform

FlexiCapture 10 is a highly scalable Enterprise Capture and document processing platform for converting streams of documents into business-ready data. FlexiCapture is available in three different variants including workgroup based solutions for departments, a client-server based capture platform for distributed data capture in large enterprises or as a server component for integration within custom-built applications. FlexiCapture scales with specific needs from low volume data capture based on a Standalone installation to high-volume in a distributed client-server solution. FlexiCapture 10 is available as follows:

	Standalone	Distributed	Server
Architecture	Desktop/Workgroup	Client/Server	Server Component
Usage	Small to medium	Enterprise	High-volume projects
Components	All tasks handled on desktop machine (local operations)	Capture platform for distribution of scanning, recognition, validation, and verification (remote operations and web stations)	Capture component for centralised and automatic processing of documents (server-based)
Deployment	Desktop installation with up to 3 processing stations	Client-/server solution with multiple components and task distribution between servers and stations.	Capture server installed in a network or integrated into a business workflow
Scalability	Limited by desktop machine	High scalability based on client-/server architecture	High scalability

Scalable, Flexible, FlexiCapture

Whether you require a desktop solution to automate low-volume data capture or an Enterprise Capture platform for processing all business-critical documents, FlexiCapture has the flexibility to address your needs.

- **Data Capture and IDR in one Solution:** from easy document capture, via data extraction from fixed forms to intelligent document recognition from semi- and unstructured documents all in one solution available from entry-level solution until enterprise capture platform
- **Any Kind of Documents:** processing of all kinds of business critical document types, such as applications, claim and order forms, invoices, and unstructured customer communication like letters or contracts.
- **High Scalability:** client-/server solution for processing high-volumes with no limits on speed and high availability through Failover Cluster support
- **Flexible Integration:** custom modules, enhanced scripting and custom export features allow FlexiCapture to be integrated into any business application
- **Distributed Capture:** allows a simple integration of decentralised workforces or outsourcing service providers through web-based stations for scanning, data verification and verification*

Licensing, Certification and Services

ABBYY's Enterprise Capture platform is sold via a network of solution partners. ABBYY offers:

- **Competitive licensing:** ABBYY offers one of the most competitive licensing schemes available on the market.
- **Licensing options:** the flexible licensing scheme allows customers to select the best option for specific projects, from volume-based licensing to CPU- or Total Page Count licensing.
- **Services:** ABBYY offers professional services to help partners jump-start projects, to provide additional expertise and support for your teams, or for certification and training.

About ABBYY

ABBYY is a leading provider of document recognition, document conversion, data capture and linguistic technologies.

Founded in 1989, the company has a long history in developing innovative technologies for retrieving information from paper, fax documents and images.

ABBYY's product portfolio offers the ideal solution for every scenario, ranging from out-of-box software for end users to full software development kits (SDKs) for system integrators, software developers and corporate IT organisations.

The constantly growing ABBYY Partner Network for Data and Document Capture contains of over 350 partners in over 100 countries
